

NMAMIT

Student Academic, Regulations, Examination & Internship Guide

For B.Tech. students — Academic Year 2026–27

Artificial Intelligence & Data Science • Artificial Intelligence & Machine Learning • Computer &
Communication Engineering • Computer Science & Engineering • Information Science &
Engineering • Robotics & Artificial Intelligence • Computer Science & Engineering (Cyber Security)
• Computer Science & Business Systems

Compiled from the 2026.01 B.Tech. Regulations & Curriculum supplied in this chat, the supplied 2024–25 NMAMIT regulations document, and current official NMAMIT/Nitte web pages checked on 2 October 2026.

Important: This is a student reference guide, not a replacement for the University's latest circulars, academic calendar, examination notifications, department instructions, or the full regulations/syllabus document.

1. What this guide contains

- B.Tech. 2026–27 academic framework and syllabus overview
- Academic regulations: duration, credits, registration, attendance, progression and degree requirements
- Examination and evaluation guidelines, grading, make-up examinations and re-evaluation
- Internship policy: community engagement, industry internship, research internship and capstone/professional practice
- Student FAQ based on the supplied regulations (not an official FAQ page)
- Official NMAMIT resources, internship opportunities and contact points
- A practical student checklist for keeping documents and deadlines organized

2. Source documents and status

Source	Use in this guide	Status
B.Tech. Regulations & Curriculum, Version 2026.01	Primary source for AY 2026–27 B.Tech. regulations, first-year syllabus, evaluation and internship framework.	Supplied PDF
Rules & Regulations (160 credits), 2024–25	Reference for the earlier NMAMIT autonomous/credit-system rules; useful for comparison, but not the controlling 2026–27 B.Tech. Nitte DU rules.	Supplied PDF
Official NMAMIT/Nitte website	Current academic calendar, rules, placement/training/internship information, departments and contacts.	Web-verified 02-10-2026

The 2026–27 B.Tech. document states that the regulations are effective from 01-08-2026 and apply to the listed B.Tech. programs.

■filecite■turn0file0■L110-L138■

3. B.Tech. 2026–27 academic framework

- The B.Tech. program is a four-year, eight-semester CBCS undergraduate engineering program, with English as the medium of instruction.
- The 2026.01 framework emphasizes choice-based credit selection, project-based learning, interdisciplinary courses, experiential learning, skill development, industry/research internships, and innovation/entrepreneurship.
- For first-year entrants, the normal program duration is 4 years. The maximum period specified is 8 years; lateral-entry students have a 6-year maximum.
- The academic year has two main semesters (Odd and Even) and an optional summer semester. Main semesters are specified as 20 weeks; the summer semester is 8 weeks.
- The 2026 regulations state that students normally register for 18–26 credits per semester, subject to prerequisites, course availability and faculty approval.
- The degree requirement in the 2026.01 framework is 165 credits for regular B.Tech. students; the supplied document also provides additional 18-credit routes for Honours/Minor credentials.

The 2026.01 document describes CBCS and CAPS as student-centred frameworks and explicitly identifies industry internship and research internship as part of the curriculum design. ■filecite■turn0file0■L80-L100■

4. Programs covered by the supplied 2026–27 first-year syllabus

- B.Tech. Artificial Intelligence and Data Science (AID/AI&DS;)
- B.Tech. Artificial Intelligence and Machine Learning (AIM)
- B.Tech. Computer and Communication Engineering (CCE)
- B.Tech. Computer Science and Engineering (CSE)
- B.Tech. Information Science and Engineering (ISE)
- B.Tech. Robotics and Artificial Intelligence (RAI)

- B.Tech. Computer Science and Engineering (Cyber Security) (CYB)
- B.Tech. Computer Science and Business Systems (CBS)

The supplied syllabus identifies the first-year scheme specifically for these eight programs and labels it 2026–27.

■filecite■turn0file0■L110-L123■

5. Syllabus — first-year overview

The supplied first-year syllabus is a course-by-course document. It includes course code, type, teaching hours, credits, CIE/SEE pattern, objectives, unit-wise syllabus, course outcomes, references and CO–PO mapping. The complete supplied syllabus should be used when preparing for a particular subject.

Examples of courses visible in the supplied document

Course	Code	Credits	Key focus
Advanced Calculus	26MAT103	4	Differential/multivariable calculus, ODE, PDE, multiple integrals
Quantum Computing and Modern Physics	26PHY102	4	Quantum mechanics, qubits/gates, superconductors, semiconductors, lasers/fibres
Introduction to Python Programming	26CSE102	3	Python basics, functions, data structures, files, OOP, exceptions, Pandas/Matplotlib
Communicative English	26HSS131	2	Phonetics, communication, grammar, comprehension and writing
Mathematics with MATLAB	26MAT107	1	MATLAB operations, symbolic/numerical work, plotting and engineering mathematics

The course details above are examples from the supplied syllabus, not a replacement for the full course list. For the complete first-year syllabus, retain the original 109-page supplied PDF. [filecite turn0file0 L282-L303](#)

Advanced Calculus — syllabus snapshot

- Course code 26MAT103; BSC; 3-1-0; 4 credits; CIE + SEE = 60 + 40.
- Units: differential calculus; partial differentiation; ordinary differential equations; partial differential equations; multiple integrals.
- The course outcomes include applying polar curves/Taylor series, multivariable calculus, solving ODE/PDE problems, and applying multiple integration and special functions.

Introduction to Python Programming — syllabus snapshot

- Course code 26CSE102; PLC; 2:0:2:0:1; 3 credits; CIE + SEE = 60 + 40.
- Units cover Python fundamentals and control flow; functions and modules; strings/lists/tuples/sets/dictionaries; file handling and object-oriented concepts; exception handling, Pandas and Matplotlib.
- The suggested experiments include programming basics, loops, functions, data structures, strings, files, classes/objects, exceptions, Pandas and graph plotting.

6. Academic regulations — important student rules

Area	2026–27 B.Tech. rule / student takeaway
Duration	4 years for first-year entry; maximum 8 years. Lateral entry: 3 years normally; maximum 6 years.
Semesters	Two main semesters plus an optional 8-week summer semester.
Credits / semester	Normally 18–26 credits, subject to prerequisites, availability and faculty approval.
Summer registration	Maximum 16 credits in summer semester; no minimum credit requirement.
Registration	Register after consulting the Faculty Advisor on dates notified in the academic calendar.
Drop / withdrawal	The 2026 regulations provide mechanisms for add/drop/withdrawal under faculty advice and prescribed timelines.
Degree credits	165 credits for the regular B.Tech. degree in the 2026.01 regulations.
Honours	Minimum 18 additional credits; eligibility includes minimum 7.5 CGPA and no backlog at the end of 4th semester.
Minor	Minimum 18 additional credits in another discipline; eligibility includes minimum 5.0 CGPA and no backlog at the end of 3rd semester.

The earlier 2024–25 supplied rules use a 160-credit B.E. framework and an 85% attendance rule, so they should not be mixed with the 2026–27 Nitte DU B.Tech. regulations. ■filecite■turn0file1■L31-L55■ ■filecite■turn0file1■L211-L236■

7. Attendance, examinations and evaluation

Attendance

- The 2026–27 B.Tech. regulations use attendance as an eligibility condition for examinations; the document specifies a 75% threshold for appearing in SEE, with an 'N' grade when attendance is below 75% or CIE requirements are not met.
- Students should monitor attendance throughout the semester rather than waiting until examination registration.

Evaluation

- For regular theory/PCC/PEC/OEC-type courses, CIE is 60 marks and SEE is 40 marks.
- CIE for non-PBL courses includes learning activities (20 marks) and two mid-semester examinations (40 marks total).
- For IPCC/PBL courses, theory and practical/PBL components are combined using the specified 60% theory + 40% practical/PBL weighting.
- The stated qualifying standard is at least 50% of CIE (30/60), at least 40% of SEE (16/40), and at least 50% aggregate for a final pass.
- Grades use absolute grading; the supplied 2026 rules list O, A+, A, B+, B, C and F, with 10, 9, 8, 7, 6, 5 and 0 grade points respectively.

Examination conduct

- The regulations state that students must be inside the examination hall 20 minutes before commencement; late entry after commencement is not permitted.
- Unfair means/malpractice cases are reported to the Controller of Examinations.
- The 2026 regulations provide re-registration routes for students who fail, are detained for attendance, withdraw, drop a course, or receive applicable transitional grades.
- Re-evaluation is permitted for theory papers according to the prescribed application period and fee.

8. Internship guidelines — 2026–27 B.Tech.

The 2026.01 regulations make internship a structured part of the B.Tech. curriculum. The internship framework distinguishes community engagement, industry internship, and longer research/professional-practice/capstone work.

A. Community Engagement — 2 credits

- Scheduled around the first-year period / vacation after Semester II, with a prescribed two-week engagement framework.
- Includes Social Connect & Responsibility and activity-based community engagement.
- Students maintain a diary and submit a report; the supplied regulations specify mentor-based evaluation and a viva/presentation component.
- The community engagement is a head of passing and its prescribed credit is reflected in the VIII-semester grade card.

B. Industry Internship — 4 weeks / 4 credits

- The 2026.01 framework schedules the industry internship during the intervening periods of Semesters IV–V and VI–VII; the two internship periods together must total 4 weeks and be completed before the beginning of Semester VIII.
- Possible formats include industrial, government, NGO, MSME, rural, innovation or entrepreneurship activities, subject to the prescribed approval/supervision process.
- The internship is supervised by a faculty mentor. Students may work individually or in small batches, with the regulations specifying batches of not more than three for the described internship activities.
- Students are required to maintain a diary/journal and submit an internship report. The report should record learning and achievements.
- The industry internship is evaluated through CIE and SEE according to the internship evaluation scheme; the supplied evaluation table lists CIE 60 + SEE 40 for a four-week industry internship, with minimum eligibility requirements.

C. Research Internship / Professional Practice / Capstone

- The 2026 framework allocates a larger final-year component for professional practice/research internship/capstone project work.
- Research internships may be undertaken in a college laboratory, research institute or company R&D; department and may be individual or small-team work.
- Interns are expected to maintain progress records, communicate with their guide, follow workplace rules, document work, manage time, and develop communication, analysis and technical skills.
- For the longer internship/project evaluation, the supplied document specifies report, presentation and viva components, with CIE and SEE assessment structures.

Internship documentation checklist

- Offer/selection letter or internship confirmation
- Approval/permission from the department/HOD as required
- Faculty mentor/guide details
- Attendance/work log
- Daily/weekly diary or journal
- Internship certificate from the organization/authorized authority
- Final internship report
- Presentation/viva material
- Any confidentiality approval before including company data, screenshots, drawings or classified material

9. Research internship — what the regulations expect

- The supplied regulations describe research internship as a focused research project that develops analytical and technical ability beyond normal classroom work.
- Students may work on a faculty/researcher project, a self-selected project under faculty guidance, or an organization-provided real-world project.
- Expected skills include communication, attention to detail, planning, documentation, critical thinking, data collection/analysis, quality and safety awareness, and ethical practice.
- Typical responsibilities include literature survey, data compilation, using appropriate software/tools, progress presentations, report writing, time management and maintaining project progress.
- Possible outcomes listed by the regulations include technical papers, prototypes, intellectual property/patent possibilities, research experience and stronger preparation for higher studies.

10. Official NMAMIT resources checked

NMAMIT home — <https://nitte.edu.in/nmamit/>

College announcements, programs, student information and official links.

Rules & Regulations — <https://nitte.edu.in/nmamit/rules.php>

Official regulations page.

Academic Calendar — <https://nitte.edu.in/nmamit/calendar.php>

2026–27 NDU B.Tech. academic calendars and SEE timetable section.

Placement / Training / Internship — <https://nitte.edu.in/nmamit/placement.php>

Abhyuday department information, training and internship facilitation.

Placement Portal — <https://placement.nmamit.in/>

Student placement/training portal and announcements.

Summer Research Internship — <https://nitte.edu.in/nmamit/summer-research-internship-program.php>

Official summer research internship program overview.

CCE internship examples — <https://nitte.edu.in/nmamit/department-CCE.php>

Department page listing internship exposure such as ISRO, NITK, IISc, DRDO CABS, Bosch, Infosys Finacle, Nutanix and others.

Student Mentoring & Counselling — <https://nitte.edu.in/nmamit/student-mentoring.php>

Faculty advisor/proctor, attendance monitoring, remedial support and parent progress reporting.

Contact NMAMIT — <https://nitte.edu.in/nmamit/contact-nmamit.php>

Official campus and academic/administrative contact details.

What the official site currently says about internships

- NMAMIT's Abhyuday (Counselling, Welfare, Training & Placement) department says it facilitates industrial training/internships and reports that more than 150 companies assist with industrial exposure/internships for students.
- The official Summer Research Internship page says the program invites faculty members to propose project ideas and then invites students to select and enroll in those projects.
- The official CCE department page lists internship exposure from organizations including ISRO, NITK Surathkal, IISc Bengaluru, DRDO CABS, Bosch, Infosys Finacle, Nutanix, Siemens Healthineers and others. These are examples reported by that department page, not a guarantee of availability for every student or every year.

11. Student FAQ

What is the current B.Tech. framework for students admitted in 2026–27?

The supplied 2026.01 Nitte DU B.Tech. regulations are the relevant framework for the listed programs. They are effective from 01-08-2026.

How many years is B.Tech.?

Normally 4 years for students entering first year. The regulations specify an 8-year maximum completion period for regular students.

How many credits are needed for the degree?

The 2026.01 regulations state 165 credits for a regular B.Tech. degree.

How many credits can I register for in a semester?

Normally 18–26 credits, subject to prerequisites, course availability and faculty approval. Summer semester registration is capped at 16 credits.

Is internship compulsory?

Yes. The 2026 regulations make the prescribed internship a mandatory degree requirement. The four-week industry internship carries 4 credits, and the document also includes community engagement and longer final-year internship/project components.

When should I do the industry internship?

The 2026 framework schedules the four-week industry internship across the intervening periods of IV–V and VI–VII semesters, with the total completed before Semester VIII.

Can I do a research internship?

Yes. The regulations explicitly provide for research internship and describe opportunities in college laboratories, research institutes and company R&D; departments.

What should I keep during an internship?

Keep your approval/selection documents, mentor details, attendance/work log, diary/journal, certificate, report and presentation/viva material.

What happens if I fail a course?

The 2026 regulations provide re-registration and subsequent examination routes according to the grade/attendance situation and when the course is offered.

Can I apply for re-evaluation?

The supplied 2026 regulations state that re-evaluation is permitted for theory papers according to the prescribed procedure, timeline and fee.

Where can I find the academic calendar?

Use the official NMAMIT Academic Calendar page. It currently lists 2026–27 NDU B.Tech. calendars for different semester groups.

Is there an official FAQ page?

A dedicated official NMAMIT FAQ page was not identified in the official-site search used for this guide. The FAQ in this document is therefore a student-reference FAQ derived from the regulations, not an official FAQ publication.

12. Student yearly checklist

- Download/save the current academic calendar for your semester.
- Keep the current regulations and your branch syllabus PDF.
- Track attendance for every course.
- Track CIE marks: learning activities + both mid-semester examinations.
- Check SEE eligibility before examination registration.
- Save every grade card and semester result.
- Before an internship: obtain department approval and confirm your faculty mentor.
- During an internship: maintain diary/journal, attendance and weekly progress.
- After an internship: collect certificate, finish report, presentation and viva requirements.
- Complete required community engagement/activity points and keep evidence.
- Before final year: check degree-credit, activity-point and internship completion status.
- Use only the latest official circulars for deadlines because schedules can change.

13. Important distinction between the two supplied regulation documents

You supplied two different rule sets. The older document is titled 'Regulations 2024–25' and is applicable to admission batch 2021–22 onwards in that document. It describes an older 160-credit B.E. credit-system framework.

■filecite■turn0file1■L3-L28■

The newer document is the 2026.01 B.Tech. Regulations and Curriculum for Nitte (Deemed to be University), effective for the 2026–27 batch and onwards. It states a 165-credit B.Tech. structure and contains the current internship/evaluation framework used in this guide. ■filecite■turn0file0■L41-L76■

Therefore, for a student admitted to the 2026–27 B.Tech. batch, the 2026.01 Nitte DU B.Tech. regulations should be the primary reference, while the older 2024–25 document should be treated as historical/reference material unless the University specifically directs otherwise.

14. Source notes

Supplied source 1: 'B.Tech. AIDS, AIMS, CCE, CSE, ISE, RAI, CYB, CSBS 1st Year(1).pdf' — 109 pages, Version 2026.01. It contains the 2026–27 B.Tech. regulations, internship guidelines, evaluation guidelines and first-year syllabus. ■filecite■turn0file0■L5-L25■

Supplied source 2: 'Rules & Regulations (160 credits)(1).pdf' — 28 pages, Regulations 2024–25, applicable in that document to admission batch 2021–22 onwards. ■filecite■turn0file1■L3-L6■

Official web research was limited to NMAMIT/Nitte official pages. Current web pages checked include the NMAMIT home page, rules page, academic calendar, placement/training/internship page, summer research internship page, department internship information, student mentoring page and contact page.
